Immunoblot detects a single protein band at 45 kDa. This selectively stains adrenergic neurons and fibers.

Applications : In general, affinity-purified antibody is used at around 1 microgram/ml for immunoblot and immunohistochemistry. The most appropriate concentration should be determined by users, because it depends on contents in given cells, tissues and organs.

Research Use : For research use only, not for use in diagnostic procedures.

Remarks : Guinea pig and goat antibodies are similar in titer and specificity.
