Antigen : tdTomato, 1-476 amino acids (KJ081243)

Specificity : This antibody selectively stains cells in tdTomato-transgenic mice, but not wild-type mice

Applications : In general, affinity-purified antibody is used at around 1 microgram/ml for immunoblot and immunohistochemistry. The most appropriate concentration should be determined by users, because it depends on contents in given cells, tissues and organs.

Research Use : For research use only, not for use in diagnostic procedures.
